

On-Skid Membrane Clean In Place & Permeate Flush System (CIP)

- The Membrane Clean-In-Place system simplifies and automates the membrane cleaning process which drastically increases the lifespan of the membranes, improving the Return On Investment (ROI)
- The CIP also doubles as a permeate flush system which immerses the membranes in RO water when the system is not running
- The permeate flush is highly recommended where the feed water is likely to cause fouling problems
- The CIP system includes PE tank, stainless steel flush pump, filter, valves, quick connect fittings and controls to automatically flush the membranes with RO permeate water at shut-down

Industrial Reverse Osmosis System with Membrane Clean-In-Place & Permeate Flush System
