

Turnkey Custom Systems with Plug & Play Convenience

The Plug & Play Skid Assembly is a turnkey system that comes equipped with all the water treatment equipment mounted on an all metal, powder coated skid with a fiberglass reinforced plastic grating floor. The pre-treatment equipment, the reverse osmosis (RO) unit, and options such as re-pressurization pumps for distribution of RO water come fully assembled, plumbed together, wired, and pre-programmed specifically to your site's unique water quality conditions. Just forklift the skid into place, connect the inlet, drain and product water lines, and hard wire in the single electrical connection to be up and running quickly. The startup procedure is greatly simplified. No need to hire plumbers for long hours of installation and programming, the time spent on the actual install is virtually eliminated with this plug and play option. You are ready to produce the highest quality water with the confidence that everything is professionally plumbed and automated. Highly recommended for systems with multiple components. Leave the hard work to us and have pure water flowing shortly after receiving your customized HyperLogic skid system.

Features

- Powder coated all-metal skid and back panel
- Fiberglass reinforced, no-rust floor
- Single point inlet, outlet, and drain
- All components and plumbing go through rigorous quality control with leak and performance testing
- All components are pre-programmed specific to your application
- Schedule 80 plumbing is used throughout the system
- Pressure gauges and sample ports are installed after each stage of filtration for simple troubleshooting and monitoring the performance of each filtration stage
- All electrical leads tied together to a single connection point

Available in three standard sizes (Long x Deep x Tall)

- 72" x 30" x ~96"
- 96" x 40" x ~96"
- 120" x 60" x ~96"
